

State Project No. H.009100.5
15th St. Pump Station Rehabilitation
Route I-110
East Baton Rouge Parish

Q. What is the horsepower of the pumps to be replaced?

A. 75 HP, Model: Fairbanks Morse 5710 (Qty: 2).

Q. What is the approximate design pumping capacity of the existing pumps?

A. Original drawings indicate pumping capacity of 9500 GPM per pump (Qty: 2).

Q. Will the new pumps be required to handle any increase in pumping capacity and will DOTD provide the new flows?

A. It is believed by DOTD that the existing design capacity is sufficient. The intent of this project is to rehabilitate within the existing configuration.

Q. Is there an approximate construction cost established for the project?

A. The construction cost is currently budgeted at approximately \$500,000 - \$600,000.

Q. Will the consultant be required to provide topographic survey or legal metes/bounds?

A. No.

Q. Will the projects limits terminate in the area adjacent to the pumping station building (i.e. no off-site piping)?

A. No, this pump station discharges to a nearby canal and the condition of the discharge piping is to be evaluated as part of the investigation prior to design work.
